AIML Developer

An Aspiring AI/ML Engineer with strong knowledge in Machine Learning, Artificial Intelligence, and Data Science. Skilled in predictive modeling, statistical analysis, and algorithms to develop datadriven solutions. Familiar with cloud computing(AWS), DBMS and automation. Interested in deep learning, natural language processing (NLP), advanced analytics for solving real-world problems. Strong in problem-solving, adaptability, and teamwork, eager to contribute to innovative AI/ML projects.

Technical Skills

Languages	:	Java, Python, HTML, CSS
Frameworks	:	Pandas, NumPy, Streamlit
Tools	:	Git, Google Colab, VS Code
Databases	:	MySQL
Core	:	Machine learning, Deep Learning, Natural Language Processing

Experience

Machine Learning Intern — Feb 2025-Apr 2025
GenZ Educate Wing — *Online*

- Worked on a Fake News Prediction project using machine learning techniques to classify news articles as real or fake. Applied Natural Language Processing (NLP) techniques for data preprocessing, tokenization, and feature extraction.
- Built and evaluated predictive models using algorithms such as Logistic Regression, Naive Bayes, and Random Forest in Python. Gained hands-on experience with Python, Pandas, Scikit-learn, and data visualization tools.
- Gained hands-on experience with Python, Pandas, Scikit-learn, and data visualization tools.

Education

B.Tech in Artificial Intelligence and Machine learning — **Surampalem**
Aditya College of Engineering and Technology — *2023 – 2027*
CGPA: 7.4

MPC- Intermediate — **Rajahmundry**
Aditya Junior College — *2021 – 2023*
CGPA: 7.91

Projects

Breast Cancer Prediction — ***Python,Pandas,NumPy,Scikit-learn, Matplotlib/Seaborn*** — Source Code

- This project predicts the likelihood of breast cancer by analyzing patient data and tumor characteristics, classifying them as benign or malignant.
- The system provides accurate and quick predictions to support early diagnosis and medical decision-making.
- It demonstrates the application of AI and data analytics in healthcare, improving both efficiency and reliability.

Push-up Counter — ***Python, OpenCV, and MediaPipe*** — Source Code

- Built a computer vision–based application using Python, OpenCV, and MediaPipe to automatically count push-ups in real time.
- Implemented pose detection, landmark tracking, and angle calculation for accurate motion analysis.
- Applied NumPy and image processing techniques for data analysis and visualization.
  Enhanced accuracy with motion tracking algorithms, gaining practical experience in human activity recognition and automation.

Certifications

- Oracle Cloud Infrastructure 2025
- Introduction to Image Generation
- SQL (Intermediate) – HackerRank (2025)
